

## OUR OCCUPATIONAL HEALTH AND SAFETY APPROACH

As YEŞİLYURT GROUP, Occupational Health and Safety is our first priority in every field we operate, and we express this understanding with the goal of "Zero Occupational Accident" and the slogan "Safety First, Work After". Everyone is obliged to do what is necessary in order to provide a safe and healthy working environment with a proactive approach in all our facilities. One of our most important goals is to protect all our employees and the environment we live in against all possible risks.

In this direction;

To use the highest quality equipment and Personal Protective Equipment, To work continuously to prevent unsafe situations and movements that may cause work accidents and occupational diseases in the workplace and its annexes, to prevent possible accident risks, To use the highest quality equipment and Personal Protective Equipment, Occupational health and safety to our employees We undertake to ensure that they reach a good occupational health and safety awareness by providing the trainings required by the legislation, internal and professional requirements in the field, and to ensure the continuity of our ISO 45001 Occupational Health and Safety Management System, which was established and carried out in this direction.

### ISO 45001

ISO 45001 Occupational Health and Safety Management System, which is a voluntary management system that can be applied to every business regardless of sector and scale; With a proactive approach, it is effectively implemented in our businesses in order to detect possible hazards that may result in damage and to take necessary precautions, to meet regulatory obligations and ethical requirements.

ISO 45001 not only shows that organizations comply with the legal regulations related to occupational health and safety, but also increases productivity and efficiency in the workplace thanks to the continuous improvement of the work environment.

In addition to determining the requirements on occupational health and safety, ISO 45001 is carried out in parallel with other management systems in our enterprises in accordance with quality and environmental standards.

The main purpose of ISO 45001; To create and manage a healthy and safe working environment by eliminating or minimizing the risks in question in the light of the legal regulations regarding occupational health and safety. To explain in more detail, the objectives of ISO 45001 that we can gather under three main headings are as follows:

- 1) Protecting the employees: Protecting the employees from the negative effects of the workplace and ensuring that they work in a comfortable and safe environment is the first aim of occupational health and safety.
- 2) Ensuring production safety: One of the objectives of occupational health and safety is to minimize labor and workday losses that may occur due to work accidents and occupational diseases, thus protecting production (product and/or service) by increasing work efficiency.
- 3) Ensuring operational safety: With the measures taken in the working environment, the elimination of fire, explosion, machine malfunctions and failures that may endanger the operation will ensure operational safety.
